

FINANCE ANALYSIS PROJECT

Business Requirements

A financial organization wants to build an interactive Finance Analytics Dashboard in Power BI to monitor and analyze overall financial transactions, customer behavior, fees, taxes, and transaction performance across different business segments and regions.

The management team faces challenges in tracking:

- Overall transaction growth and financial performance
- Monthly trends in transaction amounts
- Successful vs failed transactions
- Customer segment contribution
- State-wise financial performance
- Transaction type profitability
- Gender-based customer analysis
- Year-over-Year (YoY) performance changes

The objective of this dashboard is to provide a centralized analytical solution that helps stakeholders:

- Monitor KPIs in real time
- Identify high-performing customer segments and states
- Analyze transaction patterns and trends
- Track operational fees and taxes
- Understand customer demographics
- Improve financial decision-making and business strategy

The dashboard should allow users to dynamically filter data by:

- Year
- Dynamic Measure
- Occupation
- Category

and provide detailed visual insights for business analysis.

KPI Requirements

Main KPIs

1. Total Amount
 - Displays the total transaction amount processed.
 - Includes YoY growth comparison.
2. Total Transactions
 - Shows the total number of transactions performed.
 - Tracks yearly transaction volume changes.
3. Average Transaction Value
 - Calculates the average amount per transaction.
4. Total Fees
 - Displays total fees collected from transactions.
5. Total Tax
 - Shows total tax generated from all transactions.

Chart Requirements

1. Total Amount by Month

Chart Type: Line Chart / Area Chart

Objective: Analyze monthly transaction amount trends throughout the year and identify seasonal spikes or drops.

2. Total Amount by Transaction Status

Chart Type: Donut Chart

Objective: Compare transaction amounts based on transaction status:

- Success
- Failed
- Pending

Helps measure operational efficiency and transaction success rate.

3. Total Amount by Customer Segment

Chart Type: Horizontal Bar Chart

Objective: Analyze contribution of different customer segments:

- Retail
- Premium
- SME
- Corporate
- Wealth

Helps identify the most valuable customer groups.

4. Total Amount by State

Chart Type: Horizontal Bar Chart

Objective: Compare state-wise transaction amounts to identify top-performing regions.

5. Transaction Type Analysis

Chart Type: Matrix / Heatmap Table

Metrics Included:

- Amount
- Fees
- Tax
- Transactions Count

Transaction Types:

- Bill Payment
- Card Payment
- Deposit
- Fee Charge

- Interest Credit
- Investment
- Loan EMI
- Refund
- Transfer
- Withdrawal

Objective: Understand performance and profitability by transaction category.

6. Total Amount by Gender

Chart Type: Donut Chart

Objective: Analyze transaction amount contribution by:

- Male
- Female

Helps understand customer demographic participation.

Dashboard 2 – Create a detailed grid view and drill down for underlying records as well.
